Bad study as the reason for the deprivation of scholarship

When the student falls into the university, especially on the budget form of training, then he will promise to diligently for himself, do not walk and pull on a red diploma. Such plans, as a rule, remain only with dreams or empty words.

It is impossible to reproach the student in deception, because at this very moment he really believes in said.

But just a couple of months, and all the data of yourself promises completely fly out of the head, and the absenteeism becomes a kind of norm, stability.

Such a given puts scholarships for a great doubt, and further training of a negligent student in the university too.

Let's start with the absenteeism. If a student systematically strives for couples, is not at lecture and important practical work, then this is the beginning of all problems.

"Tails" pull over other "tailings", and then the student - Lobotryas is not allowed to surrender the session, and he can only dream about scholarship.

So that is why at the test week there is the most unexpected excitement, and the most malicious skimps and reserved lobotryas begin to the knowledge.

It is better to give everything in a timely manner, and the state, as you know, does not sponsors the absenteeism, irresponsibility and lack of desire for knowledge.

Now about failure. If the student receives unsatisfactory estimates during the session, then not to see him scholarships, "as its own ears", and this is a fact.

Let me remind you that the diligent in the university is the study, when the average score on the basis of the closed session is "4" and above.

Threeh spirits, as you know, the scholarship is not allowed, and two times and at all soon fall under the deduction.

By the way, it is planned to raise this limit soon, so that the student will have to work well for a scholarship. However, while this is an ardition for students who have been wandering in the masses for several years.

According to rumors, the new limit will be the average arithmetic "4.2" in the results of each session, but again it all depends on the financing and the number of exemplary students of universities.

Student - Marker, as the reason for the deprivation of scholarship

While the student is studying on the budget of the day office at the university, receives a scholarship; But, if he goes to the "bunch", then this source of financing can be forgotten forever.

Why do such thoughts and actions arise?

Very often, students come to the conclusion that during their studies in the university money is not enough and need to seek part-time job (many, for example, you need to provide a young family).

One manages to combine study and work, receiving a scholarship and wages at the same time; But others have to choose - to express priorities.

This is a difficult choice, but it is necessary to do it, especially when the financial side of the issue and a bright future affect the financial side.

If a student wants to preserve work, realizing that the second such chance may not be presented at all, then the transmission to the correspondence form of training becomes a compromise.

In this case, the student of the university loses the scholarship, but it gets more free time for its own implementation.

It is important to determine if there is a benefit, and how significant it is, while not to forget that studying at the university on correspondence form of training lasts at least for a year longer.

Losing time, but you get money - there is, what to think about it!
